SUMMARY

Full-stack software developer and advanced Systems Engineering student, with experience taking production applications end to end: relational data modeling, REST API development, user interface, and cloud deployment with CI/CD. Proficient in C# (.NET), React, TypeScript, and Python under clean architecture principles, with production experience on Microsoft Azure. Also skilled in Data Warehouse construction and ETL processes using Pentaho. Certified English C1. Oriented toward building real, maintainable solutions that solve concrete business problems.

WORK EXPERIENCE

Independent Software Developer — Costa Rica 2026 – Present

- Design and build custom management systems for small businesses, owning the full lifecycle: requirements gathering, database design, API development, front-end, deployment, and support.
- Delivered and currently maintain a production system in daily use by a real business (David's Bakery, detailed below).
- Translate operational problems into technical scope, timelines, and deliverables in direct communication with clients.

Concentrix — Apple Card Specialist (Contract), Goldman Sachs Department Dec 2025 – Jun 2026

- Provided customer support for financial inquiries: transactions, interest, credit limits, and balances.
- Explained billing cycles, statements, and credit usage to customers.
- Analyzed accounts to detect inconsistencies and potential issues.
- Ensured compliance with security and data privacy standards in every interaction.
- Supported customers via chat and phone with a customer experience focus.

PROJECTS

David's Bakery — Full-Stack Management System www.davisbakery.store 2026

Production web application built for a real bakery, currently in active use by the client. Replaces spreadsheets and paper notebooks with a complete management system.

- Built two independent REST APIs in ASP.NET Core 8: one for business logic (orders, customers, payments, inventory, finances) and one for authentication and password recovery via Gmail SMTP.
- Designed a relational database with 12 tables, 1 view, and 36 stored procedures on Azure SQL — all operations go through stored procedures for business rule enforcement and SQL injection prevention by design.
- Developed the front-end with React 18, TypeScript, and Vite, deployed to Azure Static Web Apps with a custom domain and auto-provisioned SSL certificate.
- Implemented JWT authentication with Axios interceptors for automatic token injection and 401 redirect handling.
- Configured three GitHub Actions CI/CD pipelines (business API, auth API, front-end) that build and deploy automatically on every push to the main branch.

Stack: C# · ASP.NET Core 8 · Dapper · Azure SQL · React 18 · TypeScript · Vite · TailwindCSS · GitHub Actions · JWT

University Software Development Projects — Fidélitas University 2023 – Present

Developed multiple academic software projects using C#, Python, and JavaScript following industry coding standards. Applied object-oriented programming principles and clean architecture practices (Controller, Business, Data Access, and Abstraction layers) to ensure maintainable solutions. Built web applications with full front-end and back-end integration against relational databases. Produced technical documentation and specifications for each deliverable, and collaborated in team-based development using Git version control.

University Database and Data Engineering Projects — Fidélitas University 2023 – Present

Designed and implemented normalized relational schemas for simulated business cases, applying integrity constraints, indexing, and query optimization on SQL Server, MySQL, and Oracle. Built stored procedures and views to enforce business rules at the database layer. Developed ETL processes with Pentaho Data Integration to consolidate data from multiple sources into a Data Warehouse under a star schema model, and produced reporting dashboards in Power BI and Tableau.

Personal Portfolio sebasgonzalez.vercel.app 2026

Single-page portfolio built from scratch with a custom design system and deployed on Vercel. Built with React, TypeScript, and Vite, with scroll and entrance animations using Framer Motion, a bilingual (Spanish/English) system implemented on React Context with persisted user preference, and client-side routing for dedicated project detail pages.

EDUCATION

2023 – Present Bachelor’s Degree in Systems Engineering at **Fidélitas University**
2018 – 2022 High School Diploma at **COOPECOCEIC**

SKILLS

Programming Languages	C# (.NET Framework / .NET Core 8), Python, JavaScript, TypeScript, SQL
Backend & APIs	ASP.NET Core, Node.js, Dapper, REST API design, JWT authentication, Postman
Frontend	React 18, TypeScript, Vite, TailwindCSS, Framer Motion
Databases	SQL Server, Azure SQL, MySQL, Oracle, MongoDB
Cloud & DevOps	Microsoft Azure (App Service, Static Web Apps, SQL Database), Vercel, GitHub Actions (CI/CD), Git
Data & BI	Pentaho Data Integration (ETL), Data Warehouse (Star Schema), Power BI, Tableau
Practices	Clean Architecture, Object-Oriented Programming, Technical Documentation

LANGUAGES

Spanish Native Proficiency
English C1 — Professional Working Proficiency (BELT Certification)

CERTIFICATIONS

- **IBM Python for Data Science, AI & Development** — IBM / Coursera (May 2026)
- **Google AI Essentials** — Google (2026)
- **BELT English Test — Level C1** — (Mar 2026)
- **CCNA: Networking Fundamentals** — Cisco Networking Academy (2024)
