

Sebastián González Rojas

Phone: +506 7270-6269 | Email: jg1829016@gmail.com | Location: San Antonio de Coronado, Costa Rica
Portfolio: portfolio-lime-nine-82.vercel.app | GitHub: github.com/Sebasgonzalez26

Professional Profile

Advanced Systems Engineering student with experience in full-stack development, REST API design, cloud deployment, and data engineering. Proficient in C# (.NET), React, TypeScript, and Python under clean architecture principles. Experienced building and shipping production applications on Microsoft Azure with CI/CD pipelines. Also skilled in Data Warehouse construction and ETL processes using Pentaho. Oriented toward building real, scalable solutions that generate measurable value.

Education

Universidad Fidélitas — Bachelor's Degree in Systems Engineering (2023 – Present)
COOPECOCEIC — High School Diploma (2018 – 2022)

Professional Experience

Concentrix — Apple Card Specialist (Contract) | Goldman Sachs Department (December 2025 – Present)

- Provide customer support for financial inquiries (transactions, interest, credit limits, balances).
- Explain billing cycles, statements, and credit usage.
- Analyze accounts to detect inconsistencies.
- Ensure compliance with security and privacy standards.
- Provide support via chat and phone with a customer experience focus.

Technical Projects

David's Bakery — Full-Stack Bakery Management System www.davisbakery.store

Production web application built for a real bakery business, currently in active use by the client. Replaces spreadsheets and paper notebooks with a complete management system.

- Built two independent REST APIs in ASP.NET Core 8: one for business logic (orders, customers, payments, inventory, finances) and one for authentication and password recovery via Gmail SMTP.
- Designed a relational database with 12 tables, 1 view, and 36 stored procedures on Azure SQL — all operations go through SPs for business rule enforcement and SQL injection prevention by design.
- Frontend built with React 18 + TypeScript + Vite, deployed to Azure Static Web Apps with a custom domain and auto-provisioned SSL certificate.
- Implemented JWT authentication with Axios interceptors for automatic token injection and 401 redirect handling.
- Set up three GitHub Actions CI/CD pipelines (API, Auth API, React) that build and deploy automatically on every push to main.
- Includes a print-optimized order ticket view (comanda) with @page CSS rules for A4 paper output.

Stack: C# · ASP.NET Core 8 · Dapper · SQL Server · React 18 · TypeScript · Vite · TailwindCSS · Framer Motion · Azure App Service · Azure Static Web Apps · Azure SQL · GitHub Actions · JWT · Gmail SMTP

Additional projects include: backend applications in C# (.NET) following clean architecture (Controller → Flujo → DA → Abstracciones), REST APIs in Node.js and Python integrated with SQL and NoSQL databases (MongoDB), frontend interfaces with React and TypeScript, and data solutions using Pentaho (ETL) with Data Warehouse design under a star schema model.

Tools and Technologies

Backend & APIs: C# (.NET Framework / .NET Core 8) · Node.js · Python · ASP.NET Core · Dapper · JWT · Secure REST APIs · Postman

Frontend: React 18 · TypeScript · Vite · TailwindCSS · Framer Motion

Databases: SQL Server · Azure SQL · MySQL · Oracle · MongoDB (NoSQL)

Cloud & DevOps: Microsoft Azure (App Service · Static Web Apps · SQL Database) · GitHub Actions (CI/CD) · Git / GitHub

Data Engineering: Pentaho Data Integration (ETL) · Data Warehouse (Star Schema)

Business Intelligence: Power BI · Tableau

Certifications

Cisco Networking Academy (CCNA) — 2024

BELT English Test (C1) — Completed March 2026

Google AI Essentials — Google, 2026 [Link](#)

IBM Python for Data Science, AI & Development — IBM / Coursera, May 2026

Soft Skills

Problem-solving · Adaptability · Leadership · Time management · Critical thinking

Languages

Spanish — Native

English — C1 (BELT Certification)
